Emotional regulation is the ability to manage and respond to emotional experiences in a socially tolerable way. AOD can be one of the strategies people adopt to regulate their emotions, which can be helpful in the short-term, but often not effective in the long-term. It makes sense then that many people who access AOD or mental health services can have difficulty managing strong or overwhelming emotions and may have limited strategies outside of AOD use.

This training aims to assist the worker to:

- Develop an understanding of emotion and emotion regulation
- Explore the skills needed to support clients to better identify, understand and manage their strong emotions
- Identify strategies that will help clients respond to overwhelming emotions in constructive ways.
